START BUILDING

Getting Started with Palantir Learn

1 Introduction To Foundry & AIP For Enterprise Organizations

15 MINS

Quickly cover the conceptual basics of Foundry & AIP. Learn their key value propositions, design, and the challenges they're meant to address so you're able to quickly connect the dots as you go through the subsequent hands-on exercises.

START NOW →

2 Speedrun: Your First End-To-End Workflow

60 MINS

The best way to learn is hands-on. Build an interactive operational application in Foundry from start to finish, no matter your level of technical expertise. Build your exposure to Foundry tools and concepts and start seeing the rapid transformation Foundry & AIP can bring to your organization.

START NOW →

3 Training Tracks

A curated blend of material for the most popular user personas on Foundry & AIP. Training Tracks provide an opinionated "Starting from Scratch," "Intermediate," and "Advanced" sequencing to provide resources for learners of all experience levels.

Courses →	Concise, hands-on courses that connect multiple tools together to achieve an outcome (Speedruns) or go deeper into a particular subject matter (Deep Dives).
Examples →	In just one click, deploy a range of fully-functional example Foundry and AIP use cases that you can tinker with, reverse-engineer, or build on top of to help understand complex topics or help get you started building quicker.
Other materials →	Relevant documentation, Partner-provided learning material, quizzes, notional projects, videos, and more.

Share your progress! You'll receive a Completion Badge after every course and quiz so you can optionally share your progress with your organization or with the world!

Applying your knowledge ↘

- → Self-guided notional projects and quizzes on learn.palantir.com
- → Palantir Developer Community challenges and events on community.palantir.com
- → Events, hackathons, and trainings provided by Palantir Partners
- → Professional Certifications on certification.palantir.com

Getting ready for Certification ↘

- → Review applicable exam study guides and complete relevant Training Tracks
- → Complete notional projects
- → Get hands-on real-world experience! We typically recommend two months of experience prior to taking your exam
- → Ask your organization or Palantir point of contact for a Certification exam code

Example Training Program

	Phase 1	Phase 2	Phase 3
Data Engineering	1. Complete Speedrun: Your First e2e Workflow. 2. Complete Deep Dive: Building Your First Pipeline. 3. Work through the example: Parse different data formats in Pipeline Builder.	1. Watch YouTube: How to Write Data Transformations in Palantir Foundry. 2. Complete Speedrun: Your First AIP Workflow.	1. Complete one of: (A) Deep Dive: Contour or (B) Deep Dive: Quiver. 2. Read full Data Lineage documentation.
Application Development	1. Complete Deep Dive: Creating Your First Ontology. 2. Complete Deep Dive: Building Your First Application. 3. Identify a post in the Developer Community tagged with "workshop".	1. Read the full Embedded Workshop Modules documentation. 2. Review Example: Create a Guided Data Entry Form in Workshop.	1. Watch YouTube: Building with Palantir AIP: Ontology SDK. 2. Review Example: Configure Layouts for Optimal Visual Impact in Workshop.
AIP	1. Watch YouTube: You Suck at AIP. 2. Review Example: Parse PDFs with LLMs in Pipeline Builder.	1. Read full AIP Logic & AIP Logic Evaluations Documentation. 2. Watch YouTube: Building with Palantir AIP: AI Assisted Cricket Team Selection	1. Review Example: Semantic Search with Palantir-provided Models.
Milestone	***Quiz:*** *Take the Foundry & AIP Builder Foundations Quiz.* **Project Creation App:** Create a simple Workshop page which allows users to request a new use case which they want to build on Foundry. They should be able to see requests and apply suitable filtering. Apply a restricted view to the data, so that a user can only see the project which they have uploaded themselves. *Create an AIP Logic function which populates a given project with a detailed description.*	**Product Feedback Analyzer**: Create a simple product feedback analysis tool in Foundry. Design a basic data model with a single entity for product feedback, including fields for product name, customer rating (1-5), and a short text comment. Generate notional data for 20 product reviews across 5 different products. Develop a basic Workshop interface with a form to input new product feedback, including dropdown for product selection, a rating input, and a text area for comments. Implement a simple AIP Logic function that performs sentiment analysis on the comment text and categorizes it as "Positive," "Neutral," or "Negative." Create a dashboard that displays an overview of products, their average ratings, and a breakdown of sentiment categories for each product.	**Foundry Capstone Project**: Develop a Foundry application that showcases your understanding of the platform's capabilities. Your project should address a real-world business challenge of your choice and demonstrate your proficiency in data modelling, Workshop interface design, and AIP Logic implementation. Your application should include: 1. A data model with at least two interconnected entities 2. A Workshop interface with at least one interactive element 3. At least one AIP Logic function that provides insights or automates a process 4. A clear business value proposition
